"Linux Kernel Spring Unpaid 2026" Mentors

January 22, 2026

LINUX FOUNDATION MENTORSHIP PROGRAM

LINUX FOUNDATION

Application for "Linux Kernel Spring Unpaid 2026" LFX Mentorship

Dear mentors,

About Me

My name is Lorenzo Pegorari, and I am a 23-year-old student at Polytechnic University of Milan, pursuing a BSc in Computer Science and Engineering. As I approach graduation, I want to gain practical experience that will help me define my future aspirations in life, and, right now, my aspiration is to become a low-level software engineer and a long-term open-source contributor to the Linux kernel and Git.

Why the LFX?

I found out about the Linux Foundation Mentorship program in 2024, while searching for programs similar to the Google Summer of Code (which I discovered by watching an interview with a Googler). Since then, I have made it my goal to participate in both these initiatives. I feel that the LFX Mentorship will allow me to deepen my understanding of C, Linux, kernel programming, and large-scale open-source projects, while also providing an invaluable opportunity to connect with the Linux community through a structured path with minimal friction.

Why Me?

Last year I had the privilege of participating in Google Summer of Code 2025 for the organization BRL-CAD, where I successfully completed my proposed project "Developing a MOOSE-based Console for arbalest: a first step to merge arbalest and qged". This achievement demonstrates that I am comfortable working within a mentorship program and that I have the skills necessary to contribute effectively to an unfamiliar and vast codebase in a short amount of time.

While my specific experience in kernel programming is currently limited, I am a quick learner, and I am confident that my dedication will allow me to succeed in this opportunity.

Sincerely,

Lorenzo Pegorari
